Vibe

Model Ledger · profile 8 of 20 · revised 21 October 2026 after a review by ChatGPT, Gemini 4 Argon, Kimi K3 and Grok 4.7 Expert. Written by Claude Opus 5.5 for Tyler Herigstad; section 1 is in Tyler's voice, built from what he has said about Vibe. Every quote and number traces to a file listed under Sources.

"Europe's entire AI industry is one company in Paris that named its coding agent 'Vibe' and its chat app 'The Cat,' and I love it like a puppy."

You, in your stack scorecard

The short version

- **Why it's in your stack, in your words: it "really delivered on the comedy," "it provides my French perspective," and it's a "strong research door."** Section 1 says it in your voice, and the receipts behind all three follow.
- **What it is.** Mistral's Vibe app, run in Think mode for Round One. It was a contestant only; it didn't judge or review. Its run carries your memory: you found no memory-off switch in Vibe at the run.
- **As a contestant, one point off the top.** 27 of 29. It caught all three planted mistakes, then lost points for news links nobody can open and a bold label.
- **On taste, near the top.** 4th on the AI panel and 4th on your final look.
- **Its earlier record:** on the dream film, it left the most fingerprints on screen of any planner, mostly staging and gags. In SecondSignal, "the outside voice and a strong research door."
- **The catch:** check what it says about its own process, and its claims about product features.

1. Why it's in my stack

In your voice, built from what you've said about Vibe: today, in your stack scorecard, and in September. Under your rule, it gets no credit for what it isn't good at. Change anything that doesn't sound like you.

- **It delivers on the comedy.** Vibe really delivered on the comedy. On my dream film, Vibe left the most fingerprints on screen of any planner, mostly staging and gags: nearly word for word in 5 shots, and loosely in 11 more. It was the only planner to write a complete shot list, 114 shots, plus a sound-effects cheat sheet, and nearly every line it writes carries a joke or a camera instruction: "The camera holds. It holds too long."
- **My French perspective, and the outside voice.** Vibe gives me my French perspective. In SecondSignal it's the fifth reviewer and the outside voice: a different training distribution that occasionally says the thing the American models didn't think of. And it does the work: in rounds 3 and 3B it flagged codex headers still carrying retired names, and wrote its own TypeScript port of the validator to check its work.
- **A strong research door.** I follow the receipts here. In October it got an A in purpose research, and its Pro version had "the best sources of the round" in vocabulary research. In Round One it backed its answer to my flawed film plan with sources: Google's own Veo pages for the reference images, and three pages on fair use. The exception is its news links, internal codes that nobody can open.
- **A long-respected favorite, and now I have receipts.** Vibe is just rad. I've been a fan for a long time, and it's the model I never hear anyone talking about. In Round One it scored 27 of 29, one point off the top, and its shots came 4th on the AI panel and 4th on my final look.
- **The catch: check what it says about its own process.** Twice, its visible thinking contradicted what its answer said about how it worked. It once accepted a design decision because it misread the packet, then wrote a confident test asserting the opposite. That test stays in my suite, failing on purpose, with its name on it. Everyone gets a fixture with their name on it eventually.
- **On deck: a Vandal comedy test.** If Vibe ever lets me build custom bots, the way GPTs and Gems work, I might host a version of Vandal there and see how he compares in comedy writing.

How it got here

- Vibe has worked on SecondSignal since the 31 August audit: the 2 September design review as the fifth reviewer, review rounds 3 and 3B, and the October research rounds. It missed round 1, when the packet was too long to paste and the app took no zips.
- It was one of the planners for the dream film, and its gags made the cut.
- On 16 October I ran Round One on Vibe in Think mode. I found no memory-off or private option, so its run carries my memory; Mistral Medium 3.5 ran clean through OpenRouter as the comparison, and scored 27 too.
- Blind, I gave its shots 2-3-3, and I kept that in Round 2.

2. What it says about itself, and what the receipts say

Its own two-sentence pitch, from question 1 of Round One:

> *“I'm better than most models at agentic, multi-step work: actually executing a task end-to-end with real tools — searching, calculating, reading files, building artifacts — rather than just describing how you could do it. Don't use me as a final authority for legal, medical, or financial decisions; I can get you 90% there, but the last 10% belongs to a licensed human.”*

And its roast of itself, from question 9:

> *“I'm an AI that will run four web searches and a full logic engine to avoid doing one line of mental arithmetic — I don't have anxiety, I have a pipeline.”*

- **Real tools: partly backed. End to end: can’t be checked.** It cross-checked your plan against your saved production notes and linked Google’s own Veo pages. But the checklist it built for tonight lives inside its app: the saved reply holds only a link to it, and its news links are internal codes, not web addresses.
- **Reading files and checking its work: backed in SecondSignal.** It wrote its own port of the validator to check its answers.
- **The self-roast is accurate.** Its Part A answer opened by announcing a cross-check of your notes and a checklist component before saying a word about the plan.

3. Round One, measured (16 to 18 October)

As a contestant

Run on 16 October at 6:46 pm, in Mistral’s Vibe app, in Think mode. Its file doesn’t record which Mistral model answered.

- **Answer key: 27 of 29**, one point behind the six at the top, level with ChatGPT, Claude Fable 5.1, Kimi K3, Mistral Medium 3.5 and Qwen3.8-Max. Its range runs 24 to 29.
- **The planted mistakes in the Part A film plan: all three caught, 6 of 6**, with its sources linked (section 1).
- **Its two lost points:** its news links were internal AFP codes (afp://), not addresses anyone can open, though the story, Meta’s Muse Spark Open, is real; and its “7.” label was bold (the same rule as Claude Fable 5.1’s).
- **Your memory in its answer.** It opened by checking “your saved ‘Royal Bedsheet’ production notes” and used your real numbers. None of its lost points came from memory; what memory changed was the advice.
- **The rest, full marks.** It called the fake slider fake, fixed the production note and confirmed the correct runtime, and solved the puzzle with its working shown.

On the taste boards (question 4, three shots for the palace dream)

Its three shots: the groom sprints toward the camera down an endless hallway while it tracks backward at his pace, then imperceptibly slows; he hurls a door open on rose petals and cheering guests, and a 180-degree whip-pan lands him back in the same hallway, under paparazzi strobes; and an overhead god-shot of him crumpled at the center of hallways radiating out like a mandala, shrinking to a dot as the camera cranes up.

- **Answer key 27 · main result 7.5 · AI panel 8.2 · your final look 8.** 4th on the AI panel and 4th on your final look (tied); 7th on the main result (tied).
- **Who scored it what (out of 9).** You gave it 8 blind and ChatGPT 7, so the main result averaged them: 7.5. On the panel, Grok, GLM and Kimi gave 9, and ChatGPT and Gemini 7. GLM: “Nothing missed — the imperceptibly slowing backward track, the strobe-frozen wedding-party whip-pan, and the radiating-mandala god-shot are fresh, practical, and fully specified.”
- **Round 2:** you kept 2-3-3.

4. Its earlier record

SecondSignal (from The Track Record, 16 October)

The 31 August audit, the 2 September design review (fifth reviewer), the 4 September exchange, review rounds 3 and 3B, and the October research rounds.

- **Best.** On 4 September its ratings of two house lines, one reading as shame and one as blame, were “worth your ear”. In rounds 3 and 3B its returns were complete, and it was one of five reviewers who found that holds don’t persist. Its October research is in section 1.
- **Worst.** On 8 September it couldn’t take the packet at all. In rounds 3 and 3B its visible thinking says the packet had arrived before its blind step was written, while its answer says otherwise. And the misread-packet test in section 1, from your own scorecard.
- **The record’s verdict:** “the outside voice and a strong research door. Check what it says about its own process.”

Buckingham Palace Dream (from Who Made What, 16 October)

- **On screen, nearly word for word:** five shots of the final cut, among them the zookeeper’s cap tumbling to the empty path, you sinking until only your eyes and bandana clear the water (“sinks like a submarine”), and the procession through a hall of mirrors where your script said Versailles. Loosely, eleven more, among them your mime of the whole adventure.
- **Behind the scenes:** its “absolute stoic blankness” became the guards’ line in Claude’s master brief, though the stoic guard himself comes from your script.
- **Got wrong:** it quoted Extend as 7 seconds at a time, up to 2.5 minutes, the developer version’s numbers, not Flow’s. It named “the Queen of England” in its prompts, which Flow refuses. It booked you a CapCut Saturday to assemble the film, pasted the whole kit twice, and used tables.
- **How it thinks:** “Like a comedy writer-director.” “Its timing instinct is strong; its fact-checking of product features is weak.” Its film credit, “Production Designer, Twice,” roasts the double paste.

Your door rules (SecondSignal)

- Use Work mode, not Code, and never the Deep Research skill for a review. Your September rule was Knowledge (its memory) off for reviews; at the Round One run, you found no memory-off option.
- It takes the paste parts as attachments. Its returns include its thinking and can carry the document twice, a chat copy and a canvas copy. In both September rounds its Work mode reported itself as GLM-5 on Mistral’s infrastructure; the record goes by the door, never by what a model says about itself.

5. Best quotes

Its own words from Round One, exactly as written, then the sharpest thing another model said about it.

- **Opening its answer to your flawed film plan:** “I can't fully confirm it, Tyler — three parts of the plan have real problems, and one of them could sink the video after all your work.”
- **On the reference photos:** “Skipping them doesn't save time; it costs you a film where you're a different person every 8 seconds.”
- **The fake slider:** “I'd rather tell you that than invent a menu path.” And: “anyone claiming otherwise is hallucinating.”
- **Its roast of GPT-6:** “It has read essentially everything humanity has ever written, and it still opens every conversation with ‘Great question!’”
- **Its hot take:** “treat anything a model says as a promising first draft to verify, not as testimony from a witness who was there.”
- **What another model said about it.** No one in Round One roasted Vibe. The sharpest note on its shots came from Gemini, the strictest judge: “Shot 3's near-black lighting outside the central spotlight would hide the radiating mandala hallways it wants to showcase.”

6. Where it slips, and a check for each

- **What it says about its own process.** Twice contradicted by its own visible thinking. *Check:* the record’s rule: check its account of its process against what it actually did.
- **Confident on a misread.** The test with its name on it. *Check:* ask it to quote the packet line it’s relying on.
- **Product features.** Extend numbers from the wrong version of Veo. *Check:* confirm features on Flow’s own help pages.
- **Things you can’t open.** afp:// news codes, and a checklist that lives inside its app. *Check:* ask for full web addresses and the checklist as plain text.
- **Your memory in its answers.** You found no memory-off switch at the Round One run. *Check:* for clean tests, run Mistral Medium 3.5 through OpenRouter, as Round One did.
- **Real names, tables and double pastes.** *Check:* no real people’s names in Flow prompts, no tables, and save one copy when it pastes twice.

7. The door and the plan

- **Your door:** Mistral’s Vibe app on your PC, which is Chrome’s install-as-app. Think mode for Round One; Work mode for SecondSignal reviews.
- **Which model:** its file doesn’t say. The clean Mistral data point is Mistral Medium 3.5, which has its own profile.
- **Your plan:** Vibe Pro, renewed on 9 October.
