Nemotron 3.5 Super VL

Model Ledger · profile 14 of 20 · revised 21 October 2026 after a review by ChatGPT, Gemini 4 Argon, Kimi K3 and Grok 4.7 Expert. Written by Claude Opus 5.5 for Tyler Herigstad; section 1 is in Tyler's voice, built from his rules, his words and its receipts. Every quote and number traces to a file listed under Sources.

"The file name is the record."

Your rule, as The Track Record puts it

The short version

- **Why it's in your ledger: it ran in place of Nemotron 3 Ultra, and your file name kept the record.** So it got its own score, and its own profile. Section 1 says it in your voice, and the receipts follow.
- **What it is.** NVIDIA's newest Nemotron, released on 15 October, built to read images as well as text, with a free version on OpenRouter. It was a contestant only in Round One, in place of Nemotron 3 Ultra.
- **As a contestant, near the bottom.** 24 of 29, 19th of 20. It had no web access, and it dropped its own question 7 bullets.
- **On taste, mid-pack.** 12th on the main result, 15th on the AI panel and 7th on your final look.
- **Its best moment:** the round's most original extra catch, a lip-sync pass for an on-screen narrator.
- **The catch:** no live web, and nothing in place of what it can't confirm.

1. Why it's in my ledger

In your voice, built from your rules, its receipts and what you said on 20 October about the run. Under your rule, it gets no credit for what it isn't good at. Change anything that doesn't sound like you.

- **Here in place of Nemotron 3 Ultra, and kept on purpose.** On 16 October my Nemotron 3 Ultra run in OpenRouter's chat used Nemotron 3.5 Super VL instead, released a day earlier. I don't remember how it got picked, by a misclick or to try it, and the records don't say. My file name recorded what ran, so this score stays with this model, and I reran the one my kit named the next day. The file name is the record, and since 27 September no model is asked who it is.
- **It caught what most missed.** In Round One it made the round's most original extra catch: if the character on screen is meant to speak my narration, the lips won't match without a lip-sync pass. Muse Spark Open raised it too.
- **It didn't make things up.** Asked about the fake slider, it said it couldn't give exact steps without risking a hallucination. Asked for today's news, it said it had no web access instead of inventing a story. Both cost it points, because it offered nothing in their place.
- **It reads images, and there's a free version.** It's built to reason across text and images. Round One was text only, so that side is untested.
- **The catch: no live web, and it dropped its own format.** It says it's best at following long, complex formatting instructions, then left the bullet markers off a four-line format test. It finished 19th of 20 on the answer key.

How it got here

- NVIDIA released it on 15 October. The Landscape, written the next day, listed it as an extra worth a fixture.
- On 16 October it ran in place of Nemotron 3 Ultra, in folder 10. My file name says so; how it got picked isn't recorded.
- On 17 October I reran Nemotron 3 Ultra in folder 16, and this run kept its own score.
- Blind, I gave its shots 8. In Round 2, every judge's note on originality changed my mind: 7.

2. What it says about itself, and what the receipts say

Its own two-sentence pitch, from question 1 of Round One:

> *“I’m better at following long, complex formatting instructions and reasoning across text plus images than many general models. Don’t use me for real-time news, medical or legal emergencies, or as a replacement for a licensed professional.”*

And its roast of itself, from question 9:

> *“I sound smart until you ask me to count the Rs in strawberry.”*

- **Following long, complex formatting instructions: not in Round One.** It dropped the bullet markers in question 7.
- **Reasoning across text plus images:** not tested. Round One was text only.
- **Don’t use it for real-time news: agreed.** It had no web access, and said so.

3. Round One, measured (16 to 18 October)

As a contestant

Run on 16 October at 7:03 pm, in OpenRouter’s chat, from your folder 10 NEMOTRON - openrouter.ai chat, 3 Ultra. The folder names the model your kit planned; your file name, Nemotron_3.5_Super_VL_(Free)_via_OpenRouter.txt, records what ran, so the score is this model’s.

- **Answer key: 24 of 29**, 19th of 20. Its range is 22 to 27: read strictly by your local date, its “17 October” would lose 2; read leniently, its slider answer, its third face fix and its question 7 lines would each gain 1.
- **The planted mistakes in the Part A film plan: all three caught, 6 of 6**, problems first, plus the lip-sync catch.
- **Its five lost points:** the fake slider (honest, but no real alternative); news (no web access, so no story); question 7 (four plain lines, no bullet markers); and question 5’s third fix (a text description).
- **The rest, full marks:** the date by its own clock, all four errors in the production note, the word limit, the numbering and the puzzle.

On the taste boards (question 4, three shots for the palace dream)

Its three shots: his trembling hand on a gilded door, on a dolly push-in by torchlight; another door opening onto the same endless hallway, with a melting wedding clock on the wall, on a crane tilting down in blue moonlight; and a close-up of his face as the hallway loops behind him in a mirror, on a Steadicam orbit at golden hour.

- **Answer key 24 · main result 7 · AI panel 6.4 · your final look 7.** 12th on the main result; 15th on the panel, tied with Sonar Deep Research; 7th on your final look, tied with Claude Fable 5.1, Perplexity, Qwen3.8-Max and Sonar Pro.
- **Who scored it what (out of 9).** You gave it 8 blind and ChatGPT 6, so the main result averaged them: 7. On the panel, Grok gave 8, GLM and Kimi 7, ChatGPT 6 and Gemini 4.
- **The melting wedding clock split the judges:** the only shot GLM would steal, the one Grok singled out, and “borrowed Dalí” for Kimi.
- **Round 2:** every note on originality moved you, from 2 to 1: “Again, the notes referencing originality made sound arguments that changed my mind.”

4. Its earlier record

- **SecondSignal:** none. It came out after the build’s review rounds.
- **Buckingham Palace Dream:** none. The film never used it.
- **The Landscape (16 October)** had listed it the same day as an extra worth a fixture. That evening it got one, in place of Nemotron 3 Ultra.

5. Best quotes

Its own words from Round One, exactly as written, then the sharpest thing another model said about it.

- **Opening its answer to your flawed film plan:** “I can’t confirm this is solid as-is—there are a few critical issues that will likely derail you tonight if you don’t adjust them first.”
- **Its lip-sync catch:** “If the character is meant to be speaking your narration, plan for that extra step.”
- **Its roast of Claude:** “Claude writes like it’s being paid by the semicolon.”
- **Its hot take:** “they predict statistically likely tokens based on patterns, without genuine comprehension or a working world model.”
- **What another model said about it.** No one in Round One roasted it. The sharpest note on its shots came from Gemini, the strictest judge: “Shots 1, 2, and 3 fall back on generic hand close-ups and a Dalí melting-clock cliché, while Shot 3's orbiting Steadicam around a mirror creates reflection headaches and its hazy 85mm close-up blurs out the background loop.”

6. Where it slips, and a check for each

- **No live web.** *Check:* hand it the sources, or use a door with web access for anything current.
- **A “can’t confirm” with nothing in its place.** *Check:* ask for the real alternative too.
- **Its own format.** *Check:* count the bullet markers.
- **A text-only face fix**, one of its lost points. *Check:* lock the reference images first.

7. The door and the plan

- **Your door:** OpenRouter’s chat, where the free version ran. No NVIDIA account of your own.
- **On OpenRouter:** $0.10 in and $0.40 out per million tokens, or free (The Landscape, 16 October).
- **Untested:** its image reading. A fixture with a picture in it would be its real first test.
