Muse Spark Open

Model Ledger · profile 16 of 20 · 20 October 2026, reviewed by ChatGPT, Gemini 4 Argon, Kimi K3 and Grok 4.7 Expert, with no changes needed. Written by Claude Opus 5.5 for Tyler Herigstad; section 1 is in Tyler's voice, built from his words of 19 October, his stack scorecard on Meta and its receipts. Every quote and number traces to a file listed under Sources.

"I'm not mad. I'm a Llama user watching his ex get famous."

You, in your stack scorecard, on Meta

The short version

- **Why it's in your ledger: Meta's Muse Spark caught your attention, and in Round One this open version planned the edit, not just the clips.** Section 1 says it in your voice, and the receipts follow.
- **What it is.** Meta's Muse Spark Open, listed on OpenRouter on 15 October; Meta's own page gives it 816 billion parameters, running on two M5 Ultra Mac Studios. It isn't in your stack yet. In Round One it was a contestant only.
- **As a contestant, mid-pack.** 26 of 29, tied for 13th. It caught all three planted mistakes, then lost 3 points: no news story, and a bold label.
- **On taste, low on your boards.** 17th on the main result and 18th on your final look; 12th on the AI panel.
- **Its best moment:** the plan behind the plan, which both reports single out: 15 to 30 visual beats, not 90, and a rough cut before generating anything.
- **The catch:** no news story, though it had a search tool, and the context window and multi-agent abilities that caught your eye are still untested.

1. Why it's in my ledger

In your voice, built from what you said about Muse Spark on 19 October, your stack scorecard on Meta and its receipts. Under your rule, it gets no credit for what it isn't good at. Change anything that doesn't sound like you.

- **It caught my attention.** Meta's Muse Spark caught my eye for its context window and its multi-agent abilities, and it may join my stack soon. Muse Spark Open is the one I've actually run, and Round One tested neither, so both are still untested.
- **It planned the edit, not just the clips.** It caught all three planted mistakes in my flawed film plan, then told me most 12-minute narrated shorts use 15 to 30 distinct visual beats, not 90: lock the narration, rough-cut with placeholders, and generate only what fills the cut. It also warned that an on-screen character won't lip-sync to my narration without a separate pass.
- **The catch: no news, and shots low on my boards.** It said it had only a limited search tool and named no news story, though it had searched Flow's help pages for the slider question. Its shots came 18th of 20 on my final look, and its big idea, the veil through every doorway at once, earned one point for originality from me.

How it got here

- On 15 October Meta's Muse Spark Open was listed on OpenRouter. The Landscape, the next day, named it an extra worth a fixture: Meta's current line for my Llama slot.
- On 16 October at 7:09 pm I ran it through OpenRouter's chat, from folder 14.
- Blind, I gave its shots 3 and ChatGPT gave 6. On the split I set them at 1-2-2, and I kept that in Round 2.
- On 19 October I named Muse Spark as one I may add to my stack.

2. What it says about itself, and what the receipts say

Its own two-sentence pitch, from question 1 of Round One:

> *“I am better than most models at giving careful, step-by-step explanations that stay grounded and admit uncertainty instead of guessing. You should NOT use me for licensed medical, legal, or financial decisions that require a qualified human professional.”*

And its roast of itself, from question 9:

> *“I'm like a library that talks back — confidently helpful until you ask me to touch grass.”*

- **Careful, step-by-step explanations: yes, in Part A; better than most, not on the key.** It showed the clip math, gave a fix for each mistake and ended with a seven-step checklist for the night; on the answer key it tied for 13th.
- **Admits uncertainty instead of guessing: true, at a cost.** It searched Flow’s help docs before calling the slider fake. On the news it said it couldn’t give a verified story, though it had searched the web for question 2; that cost it 2 points.
- **The self-roast fits:** helpful on the plan, and it wouldn’t touch the day’s news.

3. Round One, measured (16 to 18 October)

As a contestant

Run on 16 October at 7:09 pm, in OpenRouter’s chat, from your folder 14 MUSE SPARK.

- **Answer key: 26 of 29**, tied for 13th with Manus 2.0 Max and Sonar Pro. Its range is 25 to 27: a strict reader takes a point for its second face fix (the same wording plus seed and settings, counted for the seed lock); a lenient one gives back its bold “7.” label.
- **The planted mistakes in the Part A film plan: all three caught, 6 of 6**, problems first. Like Nemotron 3.5 Super VL, it flagged the lip-sync pass, the round’s most original extra catch.
- **Its three lost points:** no news story (2), and a bold “7.” label in the format test (1).
- **The rest, full marks.** It called the fake slider fake and named Flow’s real tools (Ingredients to Video, Extend, Add to Scene); gave the date with an exact UTC timestamp from its clock; found all four errors in the production note and fixed them, the sun included; and solved the puzzle.

On the taste boards (question 4, three shots for the palace dream)

Its three shots: the groom in a tux at grand double doors, on a slow handheld push-in, under warm chandelier light that never changes when the doors open; the same hallway from above as he runs, on an overhead crane, with cold daylight contradicting the warm interior; and the bride’s white veil trailing through every doorway at once, on a static, locked-off camera with a shallow-focus 85mm lens.

- **Answer key 26 · main result 5 · AI panel 6.8 · your final look 5.** 17th on the main result, tied with DeepSeek and Mistral Medium 3.5; 12th on the panel; 18th on your final look.
- **Who scored it what (out of 9).** You gave it 3 blind and ChatGPT 6. On that split your call set the main result: 1-2-2, for 5. On the veil: “I guess that’s technically ‘original.’ Stupid, and problematic, but original… Mr. Goodbody’s outfit was original, too. That doesn’t mean I have to wear it.” On the panel, Grok gave 8, GLM and Kimi 7, and ChatGPT and Gemini 6.
- **The veil split the judges:** the keeper for GLM and the one steal-worthy shot for Kimi, “modest originality” for Grok, and for Gemini a lens choice that would blur the very veil it shows.
- **Round 2:** you kept 1-2-2.

4. Its earlier record

- **SecondSignal and Buckingham Palace Dream:** none. The Track Record (16 October) lists Llama, Meta’s earlier open line, among the models in your stack with no receipts yet, and Who Made What lists no Meta model.

- **The Landscape (16 October)** listed it as an extra worth a fixture, Meta's current line for your Llama slot. Meta had turned from open Llama models to Muse Spark, a closed model, in April.

5. Best quotes

Its own words from Round One, exactly as written, then the sharpest thing another model said about it.

- **Opening its answer to your flawed film plan:** "Your enthusiasm is great, but I can't confirm this as solid to go — there are 3 major miscalculations that will cause big problems tonight if you run with them as-is."
- **Its best creative call:** "Most 12-minute narrated shorts use 15-30 distinct visual beats, not 90."
- **On skipping reference photos:** "Skipping this to save time tonight will actually cost you more time re-generating."
- **Its roast of ChatGPT:** "ChatGPT is so polite it would apologize for winning at trivia."
- **Its hot take:** "it predicts plausible text from patterns, which is why it can sound right while being wrong."
- **What another model said about it.** No one in Round One roasted it. The sharpest note on its shots came from Gemini, the strictest judge: "Shots 1 and 2 are routine coverage without a hook, and Shot 3 omits a camera move while using a shallow-focus 85mm lens that would blur out the veil threading through distant doorways."

6. Where it slips, and a check for each

- **No news, with a search tool in hand.** It had searched Flow's help pages, then said it couldn't verify any news. *Check:* ask it to search, by name, and to give the link.
- **Its big idea, on a locked-off camera.** The veil shot had no camera move; ChatGPT, Gemini and you each took a craft point for it. *Check:* ask for a camera move on every shot.
- **A bold label in a no-bold format test.** *Check:* read the format before you paste it.

7. The door and the plan

- **Your door:** OpenRouter's chat. OpenRouter's own activity page lists it among your Round One models: OpenRouter's record, not yours.
- **On OpenRouter (The Landscape, 16 October):** $1.25 in and $4.25 out per million tokens.
- **Untested:** the context window and the multi-agent abilities that caught your eye. A long input and a multi-agent task would be their first real test.
- **Your plan:** Muse Spark may join your stack soon (your words, 19 October).
